DETAILED ACTION

The following is in response to the decision by the Board of Patent Appeals and Interferences dated January 21, 2010, the communications received February 19, 2010, and the interview of August 23, 2010. Claims 1-3, 5-9, 12, and 14-16 were pending in the response of February 19, 2010. Claim 1, 12, and 14 have been amended and claim 16 has been canceled in the examiner's amendment below, based on the phone interview of August 23, 2010. Therefore, claims 1-3, 5-9, 12, and 14-15 are allowed.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Burt Amernick on August 23, 2010.

In the claims:

Please amend claims 1, 12, and 14 as follows:

1. A computerized process for managing an integrated information technology (IT) system having a plurality of components and providing a plurality of services, the process comprising the steps of:

collecting, at each of the components, usage data indicating an amount of use each component receives in providing each of the services;

reporting the usage data of each component for each service;

constructing a valuation function for valuing each service, correlating each service with each component used to provide said service;

determining, by an agent, from said correlated services and components a value of each component and a value to said IT system; and

constructing a relationship table identifying the components used in providing each service, wherein a configuration management process is fed by a change management process in order to maintain the relationship table as changes to said IT system are made.

12. A system for managing an IT infrastructure comprising:

a processor;

an information technology process model which defines a plurality of groups of processes defining information flow for an integrated management model defining the IT infrastructure for a plurality of IT services; and

a plurality of agents for monitoring each component of said IT infrastructure, said agents collecting transaction information identifying each transaction by service type;

said agents reporting over said IT infrastructure transaction information to said information process model whereby said information is used by said model,

wherein said information is processed to provide a table which identifies for each component the service in which the component participates and wherein said table includes a valuation of each component based on said component's participation in each of said services.

14. The system for managing an IT infrastructure according to claim 12, ~~13~~ wherein said information from said agents are processed to derive a second table identifying a total value of each service based on said information.
